Marat Gumarov

Software Engineer — Backend & Agentic AI

ikey678@gmail.com · github.com/MaratGumarov · @MaratGumarov · Oviedo, Spain
Spain residence permit · self-employed (autónomo)

01 SUMMARY

Software engineer with **8+ years** building scalable backend systems in Java and Kotlin — now focused on **agentic AI**: shipping production AI agents and MCP servers, and working spec-driven with AI coding tools to deliver faster across the stack.

02 SKILLS

Agentic AI Engineering	Model Context Protocol (MCP) · AI Agents · Anthropic Claude API · AWS Bedrock · Claude Agent SDK · Vercel AI SDK · Prompt Caching · OpenAI / Gemini API · OAuth for AI Agents
AI-Assisted Development	Claude Code · Spec-Driven Development · AI Pair Programming · Agent Skills & Subagents · MCP Tooling
Programming Languages	Java · Kotlin · Python · TypeScript · Scala · C#
Backend & APIs	Spring Boot · FastAPI · Microservices · gRPC · GraphQL · REST · JPA · jOOQ · R2DBC
Frontend	React · React Native / Expo · Next.js · Vite · Tailwind CSS
Data & Cloud	PostgreSQL · Apache Spark · Hadoop · Elasticsearch · AWS · Cloudflare Workers
Tools & DevOps	Git · CI/CD · Docker · Kubernetes · Helm · Gradle · Test Containers · JUnit
Spoken Languages	Russian — Native · English — Intermediate · Spanish — Basic

03 EXPERIENCE

Software Engineer

Mar 2022 — Present
Provectus
Remote · Spain

Core engineer on HOPS — Provectus' company-wide internal platform for workforce management, staffing, presales, and delivery economics.

- Designed and shipped to production an MCP (Model Context Protocol) server that gives AI agents secure, governed access to the company's internal workforce-management platform — with OAuth 2.0 token-based authorization, curated read-only data tools, and a gated SQL escape-hatch; owned the production rollout.
- Built an AI agent for automated Statement of Work generation on Anthropic Claude via AWS Bedrock — a custom agent loop that pulls live client and staffing data from internal HOPS services and detects conflicts; introduced Anthropic prompt caching to cut token cost and latency in the agent loop.
- Developed a financial microservice in Kotlin (Spring Boot, gRPC, jOOQ, R2DBC) that computes monthly employee costs and delivery economics, integrating BambooHR compensation data.
- Implemented a notification system with change logs, message queues, and Slack integration, delivering timezone- and availability-aware alerts and weekly workload reports that reduced response delays.
- Designed a role-based access control (RBAC) system for secure, fine-grained authorization across the platform.
- Built a changelog mechanism providing full entity audit history, improving transparency and data integrity.
- Contributed to a microservice-based intelligent search service over corporate documents (PDF, PNG, JPG), combining OCR with Elasticsearch-backed search.
- Developed a modern GraphQL API over legacy services, including tooling to generate GraphQL schemas and semi-automatically map queries to JPA criteria.

Kotlin · Python · TypeScript · Spring Boot · FastAPI · MCP · Anthropic Claude · AWS Bedrock · jOOQ · gRPC · GraphQL · R2DBC · PostgreSQL · Docker · Kubernetes · React

Java Developer / Data Engineer

2018 — 2022
Sberbank
Russia

- Contributed to a tool for fast streaming of data from relational databases (mainly Oracle) into Hadoop, moving tens of terabytes daily into the Sberbank data lake.
- Developed and supported all major modules of the project — initial load, incremental load, data application, and backup.
- Extended the open-source Apache Sqoop tool with missing functionality to fit project requirements.

Java · Hadoop · Apache Spark · Oracle GoldenGate · Apache Sqoop · Scala · Hive · Oozie · Spring

Java Developer

2017 — 2018

Sberbank-Technologies

Russia

– Developed an authentication service for internal corporate resources.

Java · Spring

IT Security Administrator · C# Developer

2012 — 2017

Various Companies

Russia

Information security administration and C# / .NET application development.

04 SIDE PROJECTS

AnyTest — AI Interview Coach

Repository

Web app for technical-interview prep — an AI coach on Google Gemini generates and evaluates questions, with voice input via the Web Speech API and a swipeable card UI. Fully localized into six languages.

React 19 · TypeScript · Vite · Google Gemini API · Tailwind CSS

Finch — AI Financial Assistant

Repository

A cross-platform mobile finance assistant — a conversational AI agent built with the Vercel AI SDK (Google Gemini), with a React Native / Expo client and a serverless Cloudflare Workers backend.

React Native · Expo · Vercel AI SDK · Cloudflare Workers · TypeScript

Claude Code Telegram Bot

Repository

Extended an open-source Telegram bot for remote access to Claude Code — migrated it to the official Claude Agent SDK with real-time streaming UX, and added a JWT-secured web app for browsing git diffs from chat.

Python · FastAPI · Claude Agent SDK · Telegram Bot API · JWT

05 RECOGNITION

AWS Generative AI — MCP Hackathon

Deloitte & Provectus

Winner

2025

Ranked among the ten prize-winning teams at the AWS Generative AI Innovation Center Partner Alliance hackathon — recognized for accelerating business outcomes with AWS Generative AI solutions.

06 OPEN SOURCE

Contributor — Kafka-UI

Project

Contributed features and improvements to Kafka-UI, an open-source web GUI for Apache Kafka management — including Prometheus metrics support and schema-registry fixes.

07 EDUCATION

BSc — Information Security of Automated Systems

2007 — 2012

Kazan Federal University

Apache Spark for Data Engineering

2020 · Moscow

NewProLab · 116 hours

Java Developer Course

2016 · Kazan

IT-Park · 160 hours
